Overview

This is a web application for playing music. Musify has the following features-

1. Listen Ad Free
2. Unlimited Downloads
3. More than 1 billion songs

Unique Twist

In this project the unique twist is that we can do live mashup of songs. Like if a user goes to a music and then adds it to the mashup library, he automatically gets redirected to the mashup player if the mashup library gets two songs. In the Mashup player the user can control each song's volume and mashup it to their needs.
